MEGA65 Compatibility Project

Setting up the Website

Requirements

- Webserver capable of running PHP
    - XAMPP (an Apache distribution) can be used to run the website locally
      https://www.apachefriends.org/index.html
- Web Browser e.g. Chrome, Firefox, Edge, etc.

Installation through XAMPP

Installing the files

1. Locate XAMPP's installation directory
2. Inside XAMPP's directory locate the `htdocs` directory
    - This is where the site directory will be copied to
3. Locate the .zip file of the website
    - Extract the contents into `htdocs/mega65compat`
    - If the `mega65compat` directory does not exist, create it

Accessing the website

If installed on a local webserver type into your browser:

```
localhost/mega65compat
```
